

# SUN CONURE INC.

Our Premium Recycled Plastic Lumber is manufactured from purified blends of post-consumer, pre-consumer and/or virgin HDPE (high density polyethylene) base resins. Antioxidant processing aids, UV-inhibited pigments, foaming agents and other compounds are introduced pending the end use and customer needs.

## **Features**

Essentially maintenance free due to exceptional resistance to moisture, fading, insects, splintering, warping and other common outcomes from environmental stress that one observes with common wood or wood fiber composite products.

Requires no waterproofing, staining, or other common reoccurring maintenance other than the occasional washing with soap and water to remove dirt and debris.

Color stable due to UV pigment systems which resist breakdown from prolonged sun and weather exposure.

It is possible the material may somewhat fade over the entire service life of the product. However most wood and wood composite products will fade quickly to a weathered gray look due to the wood fiber content inherent in the products.
